

INCIDENT MONITOR

臺中市 · TAICHUNG CITY

Real-Time Urban Safety & Traffic Awareness Platform

• LIVE MONITORING • MULTI-CATEGORY • INTERACTIVE MAP

THE PROBLEM

Urban incidents — collisions, floods, fires, and obstructions — affect thousands of Taichung residents daily. Yet no centralized, real-time platform existed to report, visualize, and monitor these events on a live map.

Fragmented Reporting

Residents had no unified channel to report traffic collisions or road hazards in real time.

Delayed Response

Emergency dispatchers lacked live geospatial views of flooding or fire incident clusters.

No Public Visibility

Citizens were unaware of nearby incidents, leading to dangerous detours and unnecessary risk.

OUR SOLUTION

A live, browser-based incident monitoring platform built for Taichung City, enabling citizens to report and view urban incidents in real time on an interactive map.

Deployed & Live at jazzy-gecko-01b266.netlify.app

Live Incident Map

Click to pin & report incidents instantly

Real-Time Log

Incidents stream into the sidebar log

Multi-Category

Collision · Flood · Fire · Obstruct · Other

Counter Dashboard

Live totals per incident category

Mobile-Ready

Responsive design for iOS & Android

TECHNOLOGY STACK

Frontend

- HTML5 + CSS3
- Vanilla JavaScript (ES6+)
- Leaflet.js (Map Engine)
- Responsive flex layout
- Custom dark UI theme

Backend / Infra

- Netlify Hosting (CDN)
- Serverless deployment
- Static-site architecture
- Automatic HTTPS
- Global edge delivery

Map & Data

- OpenStreetMap tiles
- Leaflet marker clustering
- GeoJSON coordinates
- Client-side state mgmt
- Real-time DOM updates

KEY FEATURES

Click-to-Report

Tap anywhere on the live Leaflet map to instantly drop a pin and submit an incident report.

Collision Tracking

Report vehicle collisions with auto-timestamped entries added to the live sidebar log.

Flood Alerts

Mark flood zones on the map for immediate public and emergency awareness.

Fire Incidents

High-priority fire reports surface immediately in the incident feed with visual markers.

Obstruction Reports

Citizens flag road blocks, debris, and hazards to reroute traffic in real time.

Live Dashboard

Header counters update instantly — Total, Collision, and Other categories tracked live.

Server
Latency

- Deployed a publicly accessible live web app on Netlify CDN
- Interactive Leaflet.js map centered on Taichung with pin-drop reporting
- Real-time incident log with category filtering (All / Collision / Flood / Fire / Obstruct / Other)
- Live header counters update automatically with every reported incident
- Fully mobile-responsive — tested on iOS devices at 3:58 AM in the field

CONCLUSION

Taichung Incident Monitor bridges the gap between citizens and city safety awareness.

By combining an interactive map, live incident classification, and a real-time dashboard, this platform empowers residents to report incidents and stay informed — all from a browser, instantly.
